## Rocksmith Torrent Mac

Had a good time playing it on here though and my ability on the bass already went way up - hit 97% mastery on Thunder Kiss 65 already.. Amazingly, I haven't experienced a lot of lag, but there's some I think both of these issues are related to my underpowered machine.. I use it on a late 2009 MacBook that officially doesn't meet the specs required for the game, and it shows.. I bought a used one off eBay and it was a major hassle (although I was able to get it worked out in the end).. 9 (Mavericks) Fortunately I'm not really interested in the lessons I haven't tried the session mode yet but I've heard some people have trouble with that too.. The lessons don't work well on my Mac at all - the audio is VERY choppy - it seems to be a problem with OS/X 10.. I did adjust the settings but so far haven't been able to get it nailed I really had a good time with my bass on it.. I haven't played too much bass - bought it just to lay down some simple bass lines.. Oct 2, 2016 - Hello Rocksmith fans! It was announced a long time ago, but it's finally time for the release of Rocksmith 2014 Remastered! Now, if you're brand.. Otherwise, I haven't had any problems running the game I finally received it friday but had some trouble getting it installed and didn't get it installed until saturday morning.

A word of advice - don't buy a used copy Rocksmith is licensed through Steam on the PC and Mac and it's registered to the original user and can't be transferred.. Anyone out there running Rocksmith on a Macbook Pro or Macbook Air? I'm thinking of picking it up for some fun and I have a PS3 and a Macbook Pro and an Air.. I've tried to find reviews online specific to the Mac version but haven't been able to find any.. Just curious how good it is with lag, etc (or any other thoughts) Thanks, Steve.. Fun way to blow a bunch of time!!Cool addition to the stable. The game works, but there are some issues The lessons videos are completely garbled to be essentially unusable.. The learning songs mode works fine - I haven't been able to get the timing of the video straight with the music - on the screen it shows the not being playing just a moment after it needs to be although I've been able to work with it.. If your machine meets the specs, it should run fine, especially if you don't really need the lessons.. I use the Macbook pro on my audio rack and have my Air with me when I travel so I'd prefer to get that edition (plus I have to kick the kids and wife off of the house TV to use the PS3 so that would limit how often I could use it).. Spent problem 6 or 7 hours playing with it yesterday and today and had a great time (in addition to about 3 hours of regular practice).
